

OUR LADY OF GOOD COUNSEL SSS GAYAZA

S1 BIOLOGY HOLIDAY WORK TERM 1 2024

1. There has been an increase in disease outbreak. The ministry of health carried out a health survey and found out that people do not look after their bodies. This is because people do not know what makes up their bodies.

There is a Primary Health Care (PHC) campaign to help the people to understand what makes their bodies such that they can easily look after them. The Busiika Health Centre II is looking for a representative from Biology club of your school to make good posters on the topic. *“A cell is the basic unit of living organisms, and how the structures of different specialized cells are related to their functions in the human body”.*

TASK

Your biology teacher has organized a contest for learners to produce a good poster on the topic. Design a poster to be able to participate in the contest.

2. Bacteria play both useful and harmful roles in the environment. Yoghurt is a common drink made through bacterial activity.

TASK.

From your research, write down the process you can use to make Yoghurt in your home.
